

Single Arm Mounting Kit Installation

WARNING: Failure to read or follow the directions below may result in damage to the HMS kit, a broken light, and/or damage to your tank, livestock, and nearby areas. Any damage resulting from failing to read or follow the directions will not be covered under warranty and C2 Development, Inc. will not be liable for any resulting damage.

For video tutorials about this installation and others, visit: support.aquailumination.com

What's Included

Step 1

Hold the **mounting rail** over the aquarium.

Use a pencil to mark the center point light placement.

Use a pencil to mark where the edge of the aquarium line up with the **mounting rail**. (this will be used for **vertical rail** placement.)

Step 2

Place the **mounting rail** and **vertical rail** next to each other so that the center channel is accessible.

Run the light power cable through the channels on both bars (see image above).

Step 3

Pull the power supply cable out of the center channel and locate it at the light placement mark closest to the **vertical rail**.

Slide on the **Hydra FiftyTwo/Hydra TwentySix bracket** to the same light placement mark and tighten screw.

Step 4

Insert the **mounting rail** and **vertical rail** into the **pivoting bracket** as shown above. Make sure that the bracket is oriented to the **mounting rail**.

Step 5

With the **vertical rail** attached relocate the **mounting rail** to line up with the tank edge mark.

Step 6

Tighten bracket attachment screws A & B.

Adjust **Mounting Rail** tension with C.

Step 7

Make sure the nut and bolt are loosely screwed together on each **clamp** to allow the nut to fit into the rail side channel.

Slide the **clamps** onto the **vertical rail** as shown above.

Step 8

Slide the **clamps** to the position that will reflect the desired height of the HMS to be mounted above the aquarium.

Use the included **Hex key** and tighten the screw on either side of the **clamps** to secure in place.

Step 9

If necessary, before mounting the light, make fine adjustments to HMS assembly width with respect to tank edges.

Step 10

Off of the tank, attach your Hydra to the **Hydra FiftyTwo/Hydra TwentySix bracket** and plug it into the previously routed cable.

Step 11

Attach the two **End Caps** to each side of the **Mounting Rail**.

Step 12

Place the HMS assembly on top of the tank and tighten clamp screws to make sure it is tight enough to stay secure to the glass.

Step 13

Create a drip loop before the extension connector by ensuring your power cable has enough length to droop down below the connector, then back up.

Warranty

C2 Development, Inc. shall warrant the Hydra Mounting System (HMS[™]) and parts for 30 days from the date of purchase against manufacturing defects and workmanship only. This warranty is non-transferable and valid for the original purchaser only. For contact information please see:
